

OPENview Control Panel

with embedded BACnet browser

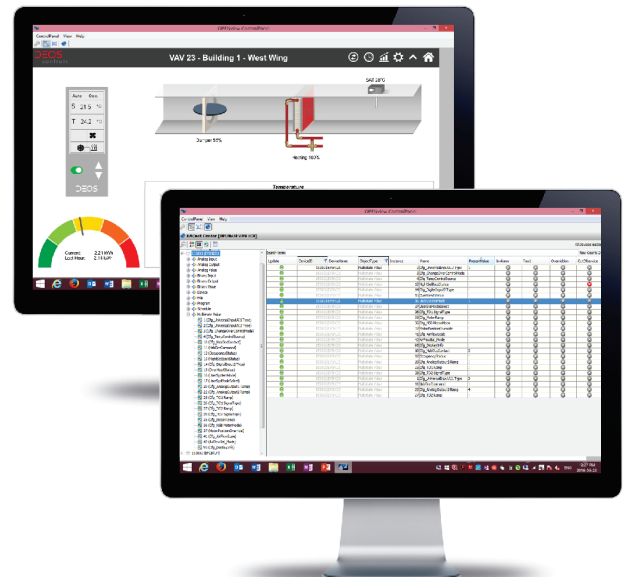

Complimentary tool

Browsing, filtering, sorting and writing

Supports BACnet/IP and BACnet MS/TP

More Features:

- Browsing – display of BACnet devices, objects and their properties in the network
- Filtering and sorting – according to name, instance, manufacturer or model
- Monitoring – monitoring of BACnet properties
- Setting – editing of BACnet properties

OPENview Control Panel

OPENview ControlPanel is the DEOS proprietary browser for OPENview. It can be used instead of your standard browser (Internet Explorer, Firefox).

The advantage of using OPENview Control Panel is its ability to enable you to work quickly and independently of the updates of your browser provider.

BACnet Browser

The embedded BACnet browser is the flexible tool to discover, test, and debug BACnet networks and devices! The BACnet browser can read/write any property of a BACnet object. All device status can be monitored at a glance.

The objects and devices are arranged in an easy-to-use tree format, which enables even users with minimal BACnet protocol knowledge easy use of this powerful tool.
