

OPENview HTML5 Graphical User Interface

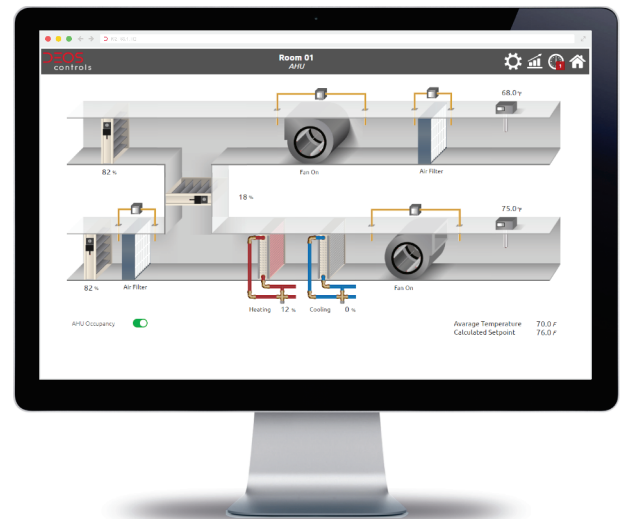

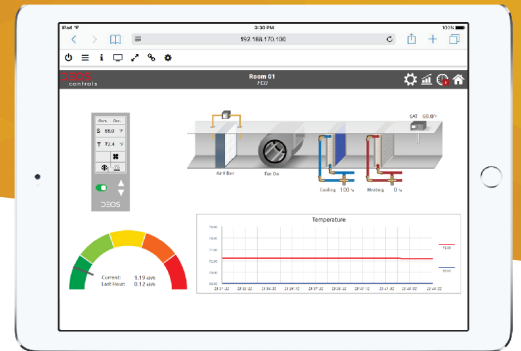

Hosted on controller's internal web server

Complimentary with OPEN 810, No Licensing

Platform-independent: IOS, Android, Windows

More Features:

- Accessible onsite or remotely from any device
- Including dynamic 3D graphics, dashboards, trends, alarms and floor layouts
- Multi-site management function
- Embedded network diagnostic tool
- Import of third party graphics

Web-based HTML 5 Interface

OPENview is the web-based graphical user interface embedded on every OPEN EMS controller providing an array of built-in features such as trend-log visualization and playback, alarm monitoring, multi-site management and user-level management.

Thanks to any OPEN EMS controller's embedded web server supporting HTML 5, users can access OPENview onsite or remotely from any device.

3D Graphics & Customization

The OPEN Controller's new integrated HTML5 web server displays the graphics faster than ever. Create stunning animated 3D graphics using our extensive graphics library or the embedded graphic editor of the our programming software FUP XL.

With OPENview, creating and maintaining customized views for end users has never been easier!
