

Project Builder

Project Configuration Software

Complimentary tool for fast configuration

Library of devices and applications

Automatically generated logic and graphics

More Features:

- Creating the building's structure, choosing the room controller and assigning it's MAC address
- Automated generation of 3D graphics including overview and navigation pages
- BACnet server and client configuration
- Customization through free programming using FUP XL

Project Configuration Made Easy

Project Builder automatically generates the controller program and loads all connected controllers throughout the entire project at the same time.

Project Builder has been designed to deliver time and cost savings during system configuration and commissioning. The flexible-to-use tool allows you to program the OPEN controller comprehensively, quickly and automatically, delivering batch programming and automated processes.

Extensive Device Library

Project Builder provides you with comprehensive options for fast configuration and automatic programming of the OPEN controller for all functional modules throughout the entire project through drag and drop.

Use our library of pre-engineered applications, that can be modified if required, or build and load your own library.
